

Hello, this is my collection of SMPS ready-made templates running on LTspice. The ZIP includes two directories that must be placed side by side in a parent directory called TOF:

This is how the ZIP file is structured anyway: just extract the Tof main folder to where you save your LTspice circuits and it should do well. Once done, you have to include a new search path for LTspice to find where the subcircuits are located:

Add these two
with your
local path

Many of these
examples appear
in my last
[manual](#). Check it
out!

Should you find any issues
with these files, kindly report
them to me via email at
cbasso@orange.fr – Merci !
